

Bharati Vidyapeeth's college of Engineering Lavale

Department of civil Engineering

PO1 Identify, formulate, research literature, and analyze Civil Engineering problems reaching substantiated conclusions.

PO2 Apply the knowledge of mathematics, science, engineering fundamentals, and Civil Engineering principles

PO3 Design solutions for complex Civil Engineering problems and design system components or processes that meet the specified needs with appropriate consideration.

PO4 Create, select, and apply appropriate techniques, resources, and modern engineering soft computing tool. Including prediction and modeling to complex Civil Engineering activities with an understanding of the limitations.

PO5Apply the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional Civil Engineering practice.

PO6 understand the impact of the professional Civil Engineering solutions in societal and environmental contexts, and demonstrate the knowledge of and need for sustainable development.

PO7Communicate effectively on Civil Engineering activities with the engineering community and with society at large such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO8 Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage Civil Engineering projects and in multidisciplinary environments.

PO9 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Building Technology and Materials (SE Civil)

Course Objectives:

- 1) To enumerate different types of structure and their requirement as building components.
- 2) To describe all basic activities of construction from foundation to finishing.
- 3) To study different types of materials used in construction for civil engineering projects.

Course Outcomes:

On completion of the course, learner will be able to:

- 1) Identify types of building and basic requirements of building components.
- 2) Explain types of masonry, formwork, casting procedure and necessity of underpinning and scaffolding.
- 3) Elucidate different types of flooring and roofing materials.
- 4) Describe types of doors, windows, arches and lintel.
- 5) Illuminate means of vertical circulation and protective coatings.
- 6) Explain different materials especially eco-friendly materials and safety measures to be adopted at any construction site.

Engineering Mathematics III (SE Civil)

Course Objectives:

After completion of the course, students will have adequate background, conceptual clarity and knowledge of mathematical principles related to:

- 1) Ordinary and Partial differential equations applied to structural analysis and fluid dynamics in civil engineering.
- 2) Numerical methods for analyzing problems in hydraulics, geotechnics and structures in civil engineering.
- 3) Statistical methods such as correlation, regression analysis and probability theory for experimental data to quantify risk and safety in their designs.
- 4) Vector differentiation and integration applied to problems in fluid mechanics

Course Outcomes:

On completion of the course, learner will be able to

- 1) Solve higher order linear differential equations and apply to civil engineering problems such as bending of beams and whirling of shafts.
- 2) Solve system of linear equations using direct and iterative numerical techniques and develop solutions to ordinary differential equations using single step and multistep methods applied to structural systems.
- 3) Apply statistical methods like correlation, regression analysis in analyzing and interpreting experimental data and probability theory applied to construction management.
- 4) Perform vector differentiation and integration, analyze the vector fields and apply to fluid flow problems.
- 5) Solve various partial differential equations such as wave equation, one and two dimensional heat flow equations.

Surveying (SE Civil)

Course Objectives:

- 1) To learn the basics of plane surveying and different types of instruments used for plane surveying.

- 2) To learn different methods of surveying.
- 3) To understand advancements in plane surveying such as electronic instruments and softwares.

Course Outcomes:

On completion of the course, learner will be able to

- 1) Operate and use surveying equipment.
- 2) Draw plan or map of the existing permanent features on the ground.
- 3) Classify the ground features from the map or plan.
- 4) Analyze temporary adjustments and check permanent adjustments of the Theodolite

Strength of Materials (SE Civil)

Course Objectives:

- 1) To study the different types of stresses due to load, temperature, etc.
- 2) To learn concept of Shear Force and Bending Moment Diagram for determinate beams.

Course Outcomes:

On completion of the course, learner will be able to

- 1) Compute different type of stresses in determinate, indeterminate, homogeneous and composite structures.
- 2) Develop bending and shear stress diagram.
- 3) Determine the torsional stresses and stresses due to strain energy for different loading conditions.
- 4) Explain the concept of principal stresses due to combined loading and able to compare the values of analytical and graphical (Mohr's circle) method.
- 5) Plot loading diagram, Shear Force Diagram (SFD) and Bending Moment Diagram (BMD).
- 6) Analyze axially and eccentrically loaded column.

Geotechnical Engineering (SE Civil)

Course Objectives:

- 1) To describe soil properties, classification and its behavior under stress.
- 2) To learn methods for measurements and determination of index & properties of soil.
- 3) To study the interaction between water and soil and the effects of static vs flowing water on soil strength.

Course Outcomes:

On completion of the course, learner will be able to

- 1) Differentiate the different types of soil and their engineering properties and classify them;
- 2) determine the soil properties in laboratory and develop a proficiency in handling experimental data;
- 3) Understand of the concept of effective stress and its influence on soil behavior.
- 4) Develop an understanding of the influence of water flow on the engineering behavior of soils.
- 5) Analyze engineering properties like compaction, permeability, soil shear strength.
- 6) Compute the lateral thrust due to backfill on the retaining walls.

Fluid Mechanics-I (SE Civil)

Course Objectives:

- 1) To study basics of Fluid Mechanics, Fluid properties and concept of submerged & floating structure in a static fluid.
- 2) To make use of principles of continuity, momentum, and energy as applied to fluid motions.
- 3) To apply fundamental principles of fluid mechanics for the solution of practical civil engineering problems.

Course Outcomes:

On completion of the course, learners will be able to:

- 1) Use fluid properties, dimensional analysis for solving problems of fluid flow.
- 2) Solve fluid statics problems.
- 3) Measure fluid pressure.
- 4) Calibrate discharge measuring instrument like venturimeter, orifice meter.
- 5) Distinguish between various types of fluid flows and find the fluid velocity using principles of Kinematics and Dynamics.
- 6) Design pipes to carry particular amount of discharge.

Architectural Planning and Design of Buildings (SE Civil)**Course Objectives:**

- 1) To understand necessity of Town planning, principles of planning, principles of architecture and byelaws.
- 2) To study the planning for building services such as noise and acoustics, ventilation, lighting, plumbing work and safety practices.
- 3) To develop the plan, elevation and section of load bearing and framed structures.

Course Outcomes:

On completion of the course, learner will be able to:

- 1) Make use of principles of planning and principles of architectural Planning.
- 2) Analyze the available primary or secondary data and plan different types of structures considering futuristic need of an area.
- 3) Improve the status of existing structures by proposing appropriate green measures.
- 4) Plan effectively various types of buildings according to their utility with reference to different codes.
- 5) Understand and resolve contemporary issues at multi-dimensional functional levels.

Structural Analysis I (SE Civil)**Course Objectives:**

- 1) To understand the basics configuration and classification of structures.
- 2) To analyze the determinate and indeterminate structures.

Course Outcomes:

On completion of the course, learner will be able to:

- 1) Understand the basic concept of static and kinematic indeterminacy, slope and deflection of determinate and indeterminate beams for analysis of structures.
- 2) Analyze indeterminate beams structures and frames.
- 3) Evaluate determinate and indeterminate trusses and its application in the field.
- 4) Apply influence line diagrams for the analysis of structures under moving load.
- 5) Analyze two and three hinged arches and its application.
- 6) Apply plastic analysis for indeterminate steel structures by limits state method.

Engineering Geology (SE Civil)**Course Objectives:**

1. To study basic of engineering geology and introductory part of the earth science.
2. To understand the utility and application of geological principles in various phases of civil engineering activities.

3. To describe the sources, and characterization of common Building materials.
4. To learn the basic aspects occur due to structural features like folds and faults.
5. To explain various natural hazards and their implications on structures and effects on society.

Course Outcomes:

1. Explain the basic concepts of engineering geology.
2. Differentiate between the different rock types, their inherent characteristics and their application in civil engineering.
3. Understand physical properties, mechanical properties of the minerals and their application in civil engineering. .
4. Identify favourable and unfavourable conditions for the buildings, roads, dam, tunneling etc through the rocks.
5. Explain mass wasting processes, effects of mass wasting process on the civil engineering structures and remedial measures.
6. Interpret geo hydrological characters of the rocks present at the foundations of the dams, percolation tanks, tunnels.
7. Understand Seismic activities and its effect on the civil engineering construction.
8. Identify geological hazards and presence of ground water.

Concrete Technology (SE Civil)

Course Objectives:

- 1) To know properties of various ingredients of concrete and concept of mix design.
- 2) To learn the behavior of concrete at its fresh and hardened state.
- 3) To understand special concrete and their application.
- 4) To explain deterioration of concrete and study methods of repair.

Course Outcomes:

On completion of the course, learner will be able to:

- 1) Understand chemistry, properties, and classification of cement, fly ash, aggregates and admixtures, and hydration of cement in concrete.
- 2) Prepare and test the fresh concrete
- 3) Test hardened concrete with destructive and nondestructive testing instruments
- 4) Get acquainted to concrete handling equipments and different special concrete types.
- 5) Design concrete mix of desired grade
- 6) Predict deteriorations in concrete and repair it with appropriate methods and techniques.

Soft Skill (SE Civil)

Course Objectives:

- 1) To help the students in building interpersonal skills.
- 2) To develop skill to communicate clearly.
- 3) To enhance team building and time management skills.
- 4) To learn active listening and responding skills.

Course Outcomes:

On completion of the course, learner will be able to:

- 1) Make use of techniques for self-awareness and self-development.
- 2) Apply the conceptual understanding of communication into everyday practice.

- 3) Understand the importance of teamwork and group discussions skills.
- 4) Develop time management and stress management.
- 5) Apply business etiquette skills effectively an engineer requires.
