Elective -II

- 1) Digital Image Processing
- 2) Sensors in Automation
- 3) Advanced JAVA Programming
- 4) Embedded Processors
- 5) Network Security

SEMESTER - V

	witribai Phule F r of <mark>E & Tc Eng</mark>	Pune University gineering (2019 Course)
	04181: Digital C	
Teaching Scheme:	Credit	Examination Scheme:
Theory: 03 hrs. / week	03	In-Sem (Theory): 30 Marks
		End Sem (Theory): 70 Marks
Prerequisite Courses, if any:		
1. Principles of Communication Syst	tems	
2. Signals & Systems		
3. Control Systems		
4. Digital Circuits		
5. Electronic Circuits.		
Companion Course, if any: Digita	al Communication La	b
Course Objectives: To make the stu	dents understand	
• To familiarize students with	various digital modu	lation techniques used in digital communication
systems.		
• To equip students the studen	ts with tools required	for performance analysis of digital communication
systems.		
• To introduce the students wi	th the concept of info	rmation theory & coding techniques.
Course Outcomes: On completion of	of the course, learner	will be able to -
CO1 : Apply the statistical theory for	describing various si	gnals in a communication system.
CO2 : Understand and explain variou analyze their performance in p	-	techniques used in digital communication systems and bise.
CO3 : Describe and analyze the digit	tal communication sy	stem with spread spectrum modulation.
CO4 : Analyze a communication sys	stem using informatio	n theoretic approach.
CO5 : Use error control coding tech	niques to improve per	formance of a digital communication system.

	Course Contents	
Unit I	Random Processes & Noise	(07 Hrs.)
	oduction, Mathematical definition of a random process, Stationary e function, Ergodic processes, Transmission of a random process the	-
Power spectral density.		
Mathematical Represent	ation of Noise: Some Sources of Noise, Frequency-domain Represe	entation of Noise,
Superposition of Noises, L using Orthonormal Coordi	inear Filtering of Noise, Quadrature Components of Noise, Representation and the second s	entation of Noise
Mapping of Course	CO1: Apply the statistical theory for describing various signal	ls in a
Outcomes for Unit I	communication system.	
Unit II	Digital Modulation-I	(07 Hrs.)
Baseband Signal Receive	r: Probability of Error, Optimal Receiver Design.	
(QPSK), M-ary Phase Shi Mapping of Course Outcomes for Unit II	CO2: Understand and explain various digital modulation techn digital communication systems and analyze their perform of AWGN noise.	-
Unit III	Digital Modulation-II	(07 Hrs.)
Generation, Reception, S	ignal Space Representation and Probability of Error Calculation	on for Quadrature
Amplitude Shift Keying	(QASK), M-ary FSK (MFSK), Minimum Shift Keying (MSK),	Pulse Shaping to
	Intersymbol Interference, some Issues in transmission and rece plexing (OFDM), Comparison of digital modulation systems.	ption, Orthogonal
	CO2: Understand and explain various digital modulation	techniques
Outcomes for Unit	used in digital communication systems and analyze	-
III	performance in presence of AWGN noise.	
Unit IV	Spread Spectrum Modulation	(06 Hrs.)
Use of Spread Spectrum,	Direct Sequence (DS) Spread Spectrum, Spread Spectrum and Cod	e Division
Multiple Access (CDMA),	Ranging Using DS Spread Spectrum, Frequency Hopping (FH) S	pread Spectrum,
Pseudorandom (PN) Seq	uences: Generation and Characteristics, Synchronization in Spread	Spectrum
Systems		
	CO3: Describe and analyze the digital communication system v	with sprood
Mapping of Course	COS: Describe and analyze the digital communication system v	with spread
Mapping of Course Outcomes for Unit IV	spectrum modulation.	

Unit V	Information Theoretic Approach to	(07 Hrs.)				
	Communication System					
Introduction to informati	on theory, Entropy and its properties, Source coding theorem,	Huffman coding,				
Shannon-Fano coding, Di	screte memory less channel, Mutual information, Channel capacit	y, Channel coding				
theorem, Differential entre	theorem, Differential entropy and mutual Information for continuous ensembles, Information Capacity theorem.					
Mapping of Course CO4: Analyse a communication system using information theoretic approach.						
Outcomes for Unit V						
Unit VI	Error-Control Coding	(06 Hrs)				
Linear Block Codes: Codin	ng, Syndrome and error detection, Error detection and correction ca	pability, Standard				
array and syndrome decod	ing. Cyclic Codes: Coding & Decoding, Convolutional Codes: Cod	ling & Decoding,				
Introduction to Turbo Codes & LDPC Codes.						
Mapping of Course	CO5: Use error control coding techniques to improve perform	ance of a digital				
Outcomes for Unit VI	communication system.

MOOC / NPTEL Courses:

1. NPTEL Course on "Digital Communications"

Link of the Course: https://nptel.ac.in/courses/108/102/108102096/

Sa	vitribai Phule Pu	ne University	
Third Yea	r of E & Tc Engi	neering (2019 Course	e)
3041	82: Electromagne	etic Field Theory	
Teaching Scheme:	Credit	Examinatio	on Scheme:
Theory: 03 hrs. / week	03 + 01 = 04	In-Sem (Theory):	30 Marks
Tutorial: 01 hr. / week		End Sem (Theory)	: 70 Marks
		Term Work:	25 Marks
Prerequisite Courses, if any:			
1. Vectors, Vector Calculus			
2. Coordinate Geometry, Carte	sian, Cylindrical, Spher	rical	
3. Engineering Mathematics III	[
Companion Course, if any: Electr	omagnetic Field Theory	y Tutorials	
Course Objectives:			
 Expose the students to basic for static and dynamic fields. Extend these laws to Unifor applications of engineering e The main focus will be on t 	rm Plane waves, transi electromagnetic field the	nission line theory and sor	ne of the case studies of
these concepts to real time ap	oplications in the field H	Electronics and Telecommu	nication Engineering.
Course Outcomes: On completion of			
CO1: Apply the basic electromagnetCO2: Apply boundary conditions to either sides.			e
CO3: State, Identify and Apply Max time-varying or Time-harmo using Poynting Theorem, Reta	nic field) for various	s sources, Calculate the tim	
CO4: Formulate, Interpret and solve the incident/reflected/transmit		-) equations, and analyz
CO5: Interpret and Apply the transm determine input and output impedance, input/load admitta	voltage/current at any	point on the Transmission	on line, Find input/loa
using Smith Chart.			
CO6: Carry out a detailed study, inte			

	Course Contents	
Unit I	Electrostatics	(08 Hrs.)
Review of 3D Coordinate	e Geometry, Vector Calculus, Physical significance of Gradient,	Divergence, Curl,
Electric field intensity(E), Displacement Flux Density(D), Gauss's law, Electric poter	ntial(V), Potential
Gradient, E/D/V due to un	niform sources (point charge, infinite line charge, infinite surface ch	arge) , Maxwell
Equations for Electrostation	cs, Current, Current Density, physical interpretation.	
Application Case Study:	Electrostatic Discharge, Cathode Ray Oscilloscope.	
	CO1: Apply the basic electromagnetic principles and determin	ne the fields (E &
Mapping of Course	H) due to the given source.	
Outcomes for Unit I	CO6: Carry out a detailed study, interpret the relevance an Electromagnetics.	d applications of
Unit II	Magneto statics	(06 Hrs)
Lorentz force, magnetic	field intensity (H), Magnetic Flux Density(B), – Biot–Savart'	s Law – Ampere's
Circuit Law – H due to	straight conductors, circular loop, infinite sheet of current, Maxy	well Equations for
Magneto Statics, physical	interpretation.	
Application Case Study:	Lightning, Magnetic Resonance Imaging (MRI).	
	CO1: Apply the basic electromagnetic principles and determin	e the fields (E &
Mapping of Course	H) due to the given source.	
Outcomes for Unit II	CO6: Carry out a detailed study, interpret the relevance and a	pplications of
	Electromagnetics.	PProutions of
Unit III	Boundary Conditions	(06 Hrs)
	•	
	c Polarization, Properties of Conductors, Dielectric Materials, Bou	2
	nductor –dielectric), significance and applications of Poisson	's and Laplace's
equations - Capacitance, I		_
	naterials, Boundary conditions for Magnetic Fields, Magnetic force	, Torque.
Application Case Study:	RF MEMS, Magnetic Levitation, Electromagnetic Pump.	
	CO2: Apply boundary conditions to the boundaries between va	arious media to
Mapping of Course	interpret behavior of the fields on either sides.	
Outcomes for Unit III		16 . A
	CO6: Carry out a detailed study, interpret the relevance and a	pplications of
	Electromagnetics.	

Unit IV	Time Varying Electromagnetic Fields: Maxwell	(06 Hrs)				
	Equations					
Scalar and Vector Magne	etic Potential, Poisson's and Laplace Equations, Faraday's law,	Translational and				
motional emf, Displaceme	nt current density, Continuity Equation, Time varying Maxwell's e	quations - point				
form, integral form, Pow	er and Poynting theorem, concept of Retarded magnetic vector	potential,				
Application Case Study:	Memristor, Electric Motors, Generators.					
	CO3: State, Identify and Apply Maxwell's equations (integral a	and differential				
	forms) in both the forms (Static, time-varying or Time-ha	armonic field)				
	for various sources, Calculate the time average power de	nsity using				
Mapping of Course Outcomes for Unit IV	Poynting Theorem, Retarded magnetic vector potential.					
	CO6: Carry out a detailed study, interpret the relevance and a	pplications of				
	Electromagnetics					
Unit V	Uniform Plane Waves	(6 Hrs)				
Maxwell's equation using	phasor notations, Electromagnetic wave equations (Helmholtz e	quation), Relation				
between E and H, depth of	of penetration, concept of polarization, Reflection by perfect co	nductor-norma				
incidence, reflection by pe	rfect dielectric- normal incidence, Snell's law.					
Application Case Study:	Comparison of Circuit Theory at low frequency and Field theory at	High frequencies,				
Antenna Radiation Mechan	nism, Propagation of EM energy.					
	CO4: Formulate, Interpret and solve simple uniform plane wa	ve (Helmholtz				
	Equations) equations, and analyze the incident/reflected/	transmitted				
Mapping of Course Outcomes for Unit V	waves at normal incidence.					
	CO6: Carry out a detailed study, interpret the relevance and applications of					
	Electromagnetics.					
Unit VI	Transmission Line Theory	(06 Hrs)				
Line parameters, skin e	effect, general solution, physical significance of the equation	ons, wavelength				
velocity of propagation, th	e distortion less line, Reflection on a line not terminated in Z0, refle	ection coefficient				
open and short circuited	lines, reflection coefficient and reflection loss, standing waves;	nodes; standing				
wave ratio, Input impe	dance of dissipation less line, Smith Chart and its applicatio	ns in solving th				

transmission line parameters.

Application Case Study: Coaxial Cable, Twisted Pair, Microwave Waveguides

Mapping of Course Outcomes for Unit VI	CO5: Interpret and Apply the transmission line equation to transmission line problems with load impedance to determine input and output voltage/current at any point on the Transmission line, Find input/load impedance, input/load admittance, reflection coefficient, SWR, Vmax/Vmin, length of transmission line using Smith Chart.
	CO6: Carry out a detailed study, interpret the relevance and applications of Electromagnetics.

List of Tutorials to be carried out

	ast 5 Assignments should be conducted using Virtual Electromagnetic Lab, /www.ee.iitb.ac.in/course/~vel/
1.	Vector analysis, Electric field Intensity(E): Due to Q, ρ_L , ρ_S
2.	Gauss's Law, Electric flux Density(D) & Electrical Potential (V) : Due to Q, ρ_L , ρ_S ,
3.	Electrostatic Boundary Conditions: dielectric-dielectric, conductor-dielectric
4.	Poisson's and Laplace's Equation: Capacitance, Energy density.
5.	Magnetic field Intensity (H)- Biot-Savart: Due to I dL, K dS, J dV, and Ampere's circuital law
6.	Magnetic Boundary Conditions, Inductance, Force, Torque, Energy density.
7.	Faradays Law, Maxwell's Equations
8.	Poynting Theorem, Retarded Magnetic Potential
9.	Transmission line: Primary & Secondary Constants, V & I
10	Reflection Coefficient, SWR, etc using Smith Chart
11	Uniform Plane Waves: Wave parameters, Incidence/Reflection /transmission of UPW.
12	All-important derivations
13	Case Study of EMF Applications to real life and wireless communication

Relational Database Design

(06 Hrs.)

Basic concepts, CODD's Rules, Relational Integrity: Domain, Referential Integrities, Enterprise Constraints, Database Design: Features of Good Relational Designs, Normalization, Atomic Domains and First Normal Form, Decomposition using Functional Dependencies, Algorithms for Decomposition, 2NF, 3NF, 4NF and BCNF.

Mapping of Course Outcomes for Unit IICO2: Design and implement a database schema for a given problem domain using data model.		en problem-
Unit III	Basics of SQL	(07 Hrs.)

DDL, DML, DCL, Structure: Creation, Alteration, Defining constraints – Primary key, Foreign key, Unique key, Not null, Check, IN operator, Functions - Aggregate Functions, Built-in Functions –Numeric, Date, String Functions, Set operations, sub-queries, correlated subqueries, Use of group by, having, order by, join and its types, Exist, Any, All, view and its types.

Transaction control commands: Commit, Rollback, Save-point PL/SQL Concepts: Cursors, Stored Procedures, Stored Function, Database Triggers.

Mapping of Course Outcomes for Unit III	CO3: Formulate, using SQL/DML/DDL commands, solutions to a wide range of query and update problems.	
Unit IV	Database Transactions Management	(07 Hrs.)

Basic concepts of a Transaction, Transaction Management, Properties of Transactions, Concept of Schedule, Serial Schedule, Serializability: Conflict and View, Cascaded Aborts, Recoverable and Non-recoverable Schedules, Concurrency Control: Need, Locking Methods, Deadlock handling and Time-stamp based Protocols.

Mapping of Course Outcomes for Unit IV	of CourseCO4: Implement transactions, concurrency control, and be able to do Database recovery.		
Unit V	Parallel Databases	(06 Hrs.)	

Introduction to Database Architectures: Multi-user DBMS Architectures, Case study- Oracle Architecture.

Parallel Databases: Performance Parameters for Parallel Databases, Types of Parallel Database Architecture, Evaluating Parallel Query in Parallel Databases and Virtualization on Multicore processors.

Mapping of Course	CO5: Able to understand various Parallel Database Arch	itectures and		
Outcomes for Unit V	applications.			
Unit VI	Distributed Databases	(07 Hrs.)		
Distributed Databases: Distributed Database Management System, Factors Encouraging DDBMS, Advantages				
of Distributed Databases, Types of Distributed Databases, Architecture of Distributed Databases, Distributed				
Database Design, Distributed Data Storage, and Distributed Transaction: Basics, Failure modes, Commit				
Protocols, Concurrency Control in Distributed Database.				

Mapping of CourseCO6: Able to understand various Distributed Databases and itsOutcomes for Unit VIapplications.

304184: Microcontroller				
Teaching Scheme:CreditExamination Scheme:				
Theory: 03 hrs. / week	03	In-Sem (Theory):	30 Marks	
v		End Sem (Theory):		
Prerequisite Courses, if any:				
1. Digital Logic Design				
2. Electronic Components and Hardy	ware			
3. Basics of C Language.				
Companion Course, if any: Micro	controller Lab			
Course Objectives: During the cou	rse study students will	be able to		
• Understand architecture and	features of 8051 and P	IC18FXX Microcontroller.		
• Learn interfacing of real-wo	rld peripheral devices	with microcontroller.		
• Explore different features of	PIC 18F Microcontrol	ler with Architecture.		
• Use concepts of timers and in	nterrupts of PIC 18 in J	programming.		
• Design and develop microco	ontroller based embedd	ed application.		
• Demonstrate real life applica	ations using PIC 18.			
Course Outcomes: On completion of	of the course, learner w	ill be able to -		
CO1: Understand the fundamentals	of microcontroller and	programming.		
CO2: Interface various electronic co	omponents with microo	controllers.		
CO3 : Analyze the features of PIC 18	BF XXXX.			
CO4: Describe the programming det	tails in peripheral suppo	ort.		
CO5: Develop interfacing models ac	cording to applications	5.		
CO6 : Evaluate the serial communication	ation details and interfa	ces.		
	Course Co	ntents		
Unit I Intro	oduction to Micro	ocontroller Architectu	re (06 Hrs.)	
Difference between microprocessor	r and microcontroller	Introduction to the Microco	ntroller classification	
Feature and block diagram of 803	51 and explanation, I	Program Status Word (PSW)), 8051. Overview o	
Instruction set, memory organization	n, Interrupt structure, ti	mers and its modes, Serial com	nmunication: concep	
of baud rate, Data transmission and r	eception using Serial p	ort. Sample programs of data	transfer, Delay using	
Timer (0&1) and interrupt, Data t	ransmission and recep	tion using Serial port. I/O P	ort Programming, Al	
programs in C language.				
Mapping of Course CO1: Outcomes for Unit I	Understand the fund	damentals of microcontroller	r and programming	

Unit II	IO Port Interfacing-I	(06 Hrs.)		
Pin diagram and its function	ing Port structure, IO Interfacing Requirements, Interfacing of	· · · · ·		
C	DAC 0808, ADC 0809 Stepper motor, Relay, Buzzer, Opto-isol	•		
	S): All programs in C language			
	CO2: Interface various electronic components with microco	antuallang		
Outcomes for Unit II	CO2. Interface various electronic components with incroco	JITTOHEIS		
Unit III	PIC 18F XXXX Microcontroller Architecture	(06 Hrs.)		
Comparison of PIC family,	Criteria for Choosing Microcontroller, features, PIC18FXX	architecture with		
generalized block diagram. N	MCU, Program and Data memory organization, Bank selection	using Bank Select		
Register, Pin out diagram, Re	set operations, Watch Dog Timers, Configuration registers and c	oscillator options		
(CONFIG), Power down mod	les, Brief summary of Peripheral support, Overview of instruction	on set.		
MappingofCourseOutcomes for Unit III	CO3: Analyze the features of PIC18F XXXX			
Unit IV	Peripheral Support in PIC 18FXXXX	(06 Hrs.)		
Timers and its Programing (m	node 0 &1), Interrupt Structure of PIC18F with SFR, PORTB ch	ange Interrupts,		
use of timers with interrupts	, CCP modes: Capture, Compare and PWM generation, DC M	otor speed control		
with CCP, Block diagram of i	n-built ADC with Control registers, Sensor interfacing using AD	OC: All programs		
in embedded C.				
MappingofCourseOutcomes for Unit IV	CO4: Describe the programming details in peripheral suppo	ort		
Unit V	Real Word Interfacing With 18FXXXX	(06 Hrs.)		
Port structure with program	ming, Interfacing of LED, LCD and Key board, Motion De	etectors, DAC for		
generation of waveform, Des	sign of PIC test Board and debugging, Home protection System	n: All programs in		
embedded C.				
Mapping of Course Outcomes for Unit V	CO5: Develop interfacing models according to applications			
Unit VI	Serial Port Programming interfacing with	(06 Hrs.)		
	18FXXXX			
Basics of Serial Communication Protocol: Study of RS232, RS 485, I2C, SPI, MSSP structure (SPI & I2C),				
USART (Receiver and Transm	nitter), interfacing of RTC (DS1307) with I2C and EEPROM wi	th SPI. Design of		
Traffic Light Controller; All p	programs in embedded C.	-		
Mapping of Course Outcomes for Unit VI	CO6: Evaluate the serial communication details and interfa	aces

		End Sem (Theory)	: 70 Marks		
Prerequisite Courses, if	any:				
1. Signals & Systems	ny: Digital Signal Process	ing Lab			
Companion Course, it a	ny: Digital Signal Process.				
-					
		hematic of digital signal process	ing.		
	sforms for analysis of syste	C			
	T, FFT, DCT transforms for	•			
C	entation of IIR digital filter				
C 1	entation of FIR digital filter	rs.			
Apply DSP algorith	*				
Course Outcomes: On con	pletion of the course, stude	nt will be able to -			
CO1: Interpret and process	discrete/ digital signals and	represent DSP system.			
CO2 : Analyze the digital sy	stems using the Z-transform	n techniques.			
CO3: Implement efficient	ransform and its application	to analyze DT signals.			
CO4: Design and implement	nt IIR filters.				
CO5: Design and implement	nt FIR filters.				
CO6: Apply DSP technique	es for speech/ biomedical/ ir	nage signal processing.			
	Course	Contents			
Unit I	DSP	Preliminaries	(06 Hrs.)		
C		n time domain, recovery of anal			
_		equencies to digital frequency,			
-		of signals as vectors, concept	•		
	-	ents, advantages of Digital over A	Analog signal processing		
Introduction to DSP proces	sor (TMS 320 XX 6713).				
Mapping of Course Outcomes for Unit I	CO1: Interpret and proc	ess discrete/ digital signals and	I represent DSP system.		
Unit II	Z- 7	Fransform	(06 Hrs.)		
Need for Z-transform, relat	ion between Laplace transfo	orm and Z transform, relation bet	tween Fourier transform		
and Z transform, Concept	of ROC and Properties of	ROC. Relation between pole lo	cations and time domain		

behavior, causality and stability considerations for LTI systems, Solution of difference equations using Z transform.

transform.		
Mapping of Course Outcomes for Unit II	CO2: Analyze the digital systems using the Z-transform	echniques.
Unit III	Transforms (DFT-FFT)	(08 Hrs.)
Frequency domain samplin	ng, DFT, Properties of DFT, circular convolution, Computation of	linear convolution
using circular convolution	, FFT, decimation in time (DIT) and decimation in frequency(DIF)	using Radix-2 FF
algorithm for 4 point and	d 8 point sequences, DFT & FFT computation complexity for 4	point and 8 poin
sequences, Linear filtering	g (Block convolution or Long sequence convolution) using overla	p add and overlag
save method.		
Mapping of Course	CO3: Implement efficient transform and its application t	o analyze DT
Outcomes for Unit	signals.	
III		
Unit IV	IIR Filter Design	(06 Hrs.)
	esign, IIR filter design by approximation of backward derivatives, II	
· · ·	od, Bilinear transformation method, warping effect. Butterwo	
*	orth filters and Chebyshev filters, IIR filter realization using direct	e
	ord length effect in IIR filter design.	iorni, cascade rom
Mapping of Course Outcomes for Unit IV	CO4: Design and implement IIR filters.	
T T 4 T 7		
Unit V	FIR Filter Design	(06 Hrs.)
	Gibbs phenomenon, characteristics and comparison of different v	
*	npulse and phase and group delays, Design of linear phase FIR filte	C
	, Blackmann & Kaiser, Magnitude and Phase response of Digital	
structure.	FIR filters, FIR filter realization using Direct Form, Cascade	e and linear phase
Mapping of Course Outcomes for Unit V	CO5: Design and implement FIR filters.	
Unit VI	Introduction to 1D & 2D Signal Processing	(06 Hrs.)
Dimensionality of signals	, Introduction of 1D signals	
Speech: Basics of speech	signal and its features, LTI representation of speech signal, Estimation	ion of fundamenta
frequency, identification of	f voiced and unvoiced speech and noise removal	
Biomedical Signal: Basic	s of ECG and its features, Spectral Analysis using FFT, Artifacts su	ppression,
Algorithms for R peak det	ection	
Fundamentals of image p	processing: Representation of digital image, Spatial and Temporal	resolution, 2D
convolution for feature ex	traction	

convolution for feature extraction.

		End Sem (Theory): 7			
Prerequisite Courses, if any:					
1. Data Structures					
2. Object Oriented Programming co	ncept				
Companion Course, if any: Fu	ndamentals of JAVA Pro	ogramming Lab			
Course Objectives:					
• Make the students familiar v	with basic concepts and t	echniques of object oriented pro	ogramming in Java.		
• Develop an ability to write v	arious programs in Java	for problem solving.			
Course Outcomes: On completion					
CO1: Understand the basic principl					
CO2: Apply the concepts of classes	and objects to write pro	grams in Java			
CO3: Demonstrate the concepts of r	nethods & Inheritance				
CO4: Use the concepts of interface	s & packages for program	n implementation			
CO5: Understand multithreading an	nd Exception handling ir	a Java to develop robust program	ms		
CO6: Use Graphics class, AWT page	ckages and manage inpu	t and output files in Java			
	Course Con	tents			
Unit I	JAVA Fu	ndamentals	(08 Hrs.)		
Review of Object oriented concepts,	Evolution of Java, Com	parison of Java with other prog	gramming languages,		
Java features, Java and World Wid	e Web, Java Run Time	Environment. JVM architectur	e. Overview of Java		
Language, Simple Java Program, Ja	va Program Structure. In	stalling and Configuring Java.			
Java Tokens, Java Statements, Con	nstants, variables, data	types. Declaration of variable	es, Giving values to		
variables, Scope of variables, array	vs, Symbolic constants,	Typecasting, Getting values of	f variables, Standard		
default values, Operators, Expressio	ns, Type conversion in e	xpressions, Operator precedenc	e and associatively,		
Mathematical functions, Control star	tements- Decision makin	g & looping.			
MappingofCourseCO1: UsOutcomes for Unit I	nderstand the basic pr	inciples of Java programmin	g language.		

Unit II	Classes and Objects	(06 Hrs.)			
Class Fundamentals, Cre	ating Objects, Accessing Class members, Assigning Object re	ference variables,			
Methods, Constructors, us	Methods, Constructors, using objects as parameters, Argument passing, returning objects, Method Overloading,				
static members, Nesting of	Methods , this keyword, Garbage collection, finalize methods, , fin	nal variables and			
methods, final class.					
Mapping of Course	CO2: Apply the concepts of classes and objects to write progra	ams in Java			
Outcomes for Unit II					
Unit III	Methods & Inheritance in JAVA	(06 Hrs.)			
		, , , , , , , , , , , , , , , , , , ,			
	lasses, Strings ,One dimensional and two dimensional arrays ,	wrapper classes,			
enumerated types, Comma	and line arguments				
Inheritance: Inheritance	in Java, Creating Multilevel hierarchy, Constructors in deriv	ved class, Method			
overriding, Dynamic meth	od dispatch.				
Mapping of Course	CO3: Demonstrate the concepts of methods & Inheritance.				
Outcomes for Unit III					
Unit IV	Interfaces & Packages	(06 Hrs.)			
Interfaces: Define, implement and extend, Accessing Interface variables, Default interface methods, Using					
static method in interface					
Packages: Java API Pac	kages, Using System Packages, Creating accessing and using a pa	ackage, Importing			
packages, Adding a class t	o a Package, Hiding classes.				
Mapping of Course	CO4: Use the concept of interfaces & packages for program im	plementation.			
Outcomes for Unit IV					
Unit V	Multithreading & Exception Handling	(06 Hrs.)			
Introduction to multithrea	ding: Introduction, Creating thread and extending thread class. Conc	cept of Exception			
handling: Introduction, Ty	pes of errors, Exception handling syntax, Multiple catch statements				
I/O basics, Reading console inputs, Writing Console output. Applets: Concepts of Applets, differences between					
applets and applications, l	ife cycle of an applet, types of applets, creating a simple applet.				
Mapping of Course	CO5: Understand multithreading and Exception handling in	n Java to develop			
Outcomes for Unit V	robust programs				

Unit VI	Graphics Programming and File Handling	(06 Hrs.)
Graphics class, Introducti	on to AWT packages, Handling events on AWT components, Intro	oduction to Swing
package, components and	containers.	
Managing input/output	files: Concept of streams, Stream Classes, Byte stream, Charac	ter stream, Using
~		

Stream, creation of files, reading or writing characters / bytes, Concatenating and buffering files, Random access files.

MappingofCourseCO6: Use Graphics class, AWT packages and manage input and output files inOutcomes for Unit VIJava

Teaching Scheme:CreditExamination Scheme:				
Practical: 02 hrs. / week	01	Practical: 50 Marks		
Prerequisite Courses, if any:				
1. Principles of Communication System	ms			
2. Signals & Systems				
3.Control Systems				
4. Digital Circuits				
5. Electronic Circuits.				
Companion Course, if any: Digital C	Communication The	eory		
1 <i>i</i> i i		ructor's Manual		

Guidelines for Instructor's Manual

Design minimum 10 Assignments on the topics listed under Group A & B Below & prepare your own Instructor's Manual. Minimum 2 experiments should be designed from group A & B each and Minimum 3 can be from group C &D each. Use of highend equipment like USRP is encouraged for Group A & B experiments.

Guidelines for Student's Lab Journal

The student's Lab Journal can be experimental write-ups. It should include following as applicable: Assignment No, Title of Assignment, Date of Performance, Date of Submission, Aims & Objectives, Theory, Description of data used, Results, Conclusion.

Guidelines for Lab /TW Assessment

The practical examination will be based on the work carried out by the student in the Lab course. Suitable rubrics can be used by the internal & external examiner for assessment.

List of Laboratory Experiments

Group A (Any Two)				
1.	Study of BPSK transmitter & receiver using suitable hardware setup/kit.			
2.	Study of QPSK transmitter & receiver using suitable hardware setup/kit.			
3.	3. Study of BFSK transmitter & receiver using suitable hardware setup/kit.			

4.	Study of Baseband receiver performance in presence of Noise using suitable hardware setup/kit.
	Group B (Any Two)
1.	Study of Error Control Coding using suitable hardware setup/kit.
2.	Study of DSSS transmitter and receiver using suitable hardware setup/kit.
3.	Study of FHSS transmitter and receiver using suitable hardware setup/kit.
	Group C (Any Three)
1	Simulation study of Performance of M-ary PSK.
2	Simulation study of Performance of M-ary QAM.
3	Simulation study of OFDM transmitter & receiver.
4	Simulation study of random processes. Find various statistical parameters of the random process.
5	Simulation Study of performance of BPSK receiver in presence of noise.
6	Simulation Study of CDMA technique.
	Group D (Any Three)
1	Simulation study of Source Coding technique.
2	Simulation study of various Entropies and mutual information in a communication system.
3	Simulation Study of Linear Block codes.
4	Simulation Study of cyclic codes.
5	Simulation Study of Convolutional codes
6	Simulation Study of Performance of Digital communication system with error control coding.
	LAB Links:
2. Li	nk: <u>https://vlab.amrita.edu/index.php?sub=59&brch=163∼=262&cnt=970</u>

Note: Additional 2 experiments to be performed using the virtual labs.

Prerequi	site Courses, if any:		1	
Compani	on Course, if any: Data	base Management Syste	m	
	L	ist of Laboratory	Experiments	
	Group A- I	Database Program	ming Languages – SQL	
1.	Study of Open Source	Relational Databases: My	vSQL	
2.	Design and develop at	SQL DDL statements wh	nich demonstrate the use of SQL objects such as	
	Table, View, Index, Se		- •	
3.	Design and develop at	least 5SQL queries for su	itable database application using SQL DML	
	statements: Insert and S	select with operators and	functions.	
4.	Design and develop at	least 5 SQL queries for s	uitable database application using SQL DML	
	statements: Update and	Delete with operators an	nd functions.	
5.	Design and develop at	east 5 SQL queries for s	uitable database application using SQL DML	
	statements: all types of	Join and Sub-Query.		
	Group B- Data	abase Programmi	ng Languages – PL / SQL	
6.	 Write a PL/SQL block of code for the following requirements:- Schema: Borrower (Roll no., Name, Date of Issue, Name of Book, Status) Fine (Roll no, Date, Amt.) Accept roll no. & name of book from user. Check the number of days (from date of issue), if days are between 15 to 30 then fine amount will be Rs 5per day. If no. of days>30, per day fine will be Rs 50 per day & for days less than 30, Rs. 5 per day. After submitting the book, status will change from I to R. If condition of fine is true, then details will be stored into fine table. 			
7	-	C C	/SQL block in line with above statement.	
7.			OR Loop, Parameterized Cursor) ized Cursor that will merge the data available in the	
	-	01	vailable in the table O_RollCall. If the data in the	
	-		that data should be skipped.	
			riting PL/SQL block to implement all types of	
	Cursors in line with above statement. The problem statement should clearly state the			

	requirements.			
8.	PL/SQL Stored Procedure and Stored Function.			
	Write a Stored Procedure namely proc_Grade for the categorization of student. If marks scored by			
	students in examination is <=1500 and marks>=990 then student will be placed in distinction			
	category if marks scored are between 989 and 900 category is first class, if marks 899 and 82			
	category is Higher Second Class			
	Write a PL/SQL block for using procedure created with above requirement. Stud_Marks(name			
	total_marks) Result(Roll,Name, Class).			
	Frame the separate problem statement for writing PL/SQL Stored Procedure and function			
	in line with above statement. The problem statement should clearly state the requirements.			
9.	Database Trigger (All Types: Row level and Statement level triggers, Before and After Triggers)			
	Write a database trigger on Library table. The System should keep track of the records that ar			
	being updated or deleted. The old value of updated or deleted records should be added in			
	Library_Audit table.			
	Frame the problem statement for writing Database Triggers of all types, in-line with abov			
	statement. The problem statement should clearly state the requirements.			
	Group C- Mini Project: Database Project Life Cycle			
11.	Implement MYSQL/Oracle database connectivity with PHP/python/Java Implement Database			
	navigation operations (add, delete, edit,) using ODBC/JDBC.			
12.	Using the database concepts covered in Group A & Group B & connectivity concepts covered i			
12.

Compani	ion Course, if any: - Dig	gital Signal Processing			
	L	ist of Laboratory	Experiments		
		Group A (All co	mpulsory)		
1.	Verify the sampling the	eorem and aliasing effe	cts with various sampling frequencies.		
	Also implement the sar	npling theorem using V	LAB.		
2.	Find the z-transform of	f a given difference equ	ation, compute its pole zero plot and comment on its		
	stability.				
3.	Compute DFT and IDF	T { e.g. $x(n) = \{1, 2, 3, 4\}$	} using N=4 and N=8}		
4.	Find N-point circular c	onvolution using form	la and verify its results.		
	Implement linear filter	Implement linear filtering using circular convolution			
5	Implement IIR structur	res using Direct form I/	II/ Cascade form.		
	Implement FIR structu	res using Direct Form/0	Cascade/Linear phase structures.		
6.	Study the windowing e	Study the windowing effect (time and frequency) for rectangular, hamming, hanning, blackmann			
	and Kaiser windows.				
		Group B (Ar	ny Two)		
7.	Design a Butterworth f	ilter using Bilinear Tra	nsformation, for the following conditions:		
0.8≤ [[H(e]] ^jw) ≤1 0≤ ≤0.2π					
	$ $ [H(e] ^jw) \leq $ \leq$ 0.2 0.6 \leq \leq π				
	OR				
	Design a Second order	r band pass Digital Bu	tterworth filter with passband of 200 Hz to 300 Hz		
	and sampling frequency	y of 2000Hz using Bilin	near Transformation.		
			OR		
	Evaluate the order and	the poles of a Butterw	orth filter which has a 3dB bandwidth of 1000Hz		
	and a attenuation of 20dB at 2000 Hz. Determine the system function H(z) by Bilinear				
	Transformation using T=1/10000				

8.	Design the symmetric FIR low pass filter for which desired frequency response is expressed as
	Hd (w)={($e^{-jw\tau}$ for $ w \le wc$) and 0 elsewhere
	The length of the filter should be $M = 7$ and $Wc=1$ radians/sample.
	Make use of the Rectangular/ Hamming/ Hanning/Blackman/ Kaiser window.
9.	Verify the Sampling Theorem in frequency domain using FFT for undersampled, Nyquist and
	oversampled signals.
10.	Compute the DFT by writing a function for the N>32 sequence. Calculate the computational
	complexity. Compare the time required by DFT & FFT functions.
	Group C (Any two)
11.	Implement the Block Convolution algorithms: a) Overlap-add b) Overlap-save
12.	Find the pitch frequency of given speech signal using the autocorrelation method
13.	Implement the following ECG Signal Processing operations:
	a) Suppression of motion artifacts in ECG using N point moving average filters.
	b) Peak detection of ECG signal by using Band-limiting digital filters
14.	Image feature extraction using 2D convolution
	LAB Links: x of the Virtual Lab: <u>http://vlabs.iitkgp.ernet.in/dsp/#</u>

Note: Additional 2 experiments to be performed using the virtual labs.

Savitribai Phule Pune University Third Year of E & Tc Engineering (2019 Course) 304189 (C): Fundamentals of JAVA Programming Lab (Elective - I)					
Tea	ching Scheme:	Credit	Examination Scheme:		
Practica	al: 02 hrs. / week	01	Practical: 25 Marks		
Prerequis	site Courses, if any: - K	nowledge of Object O	riented Programming		
Compani	on Course, if any: Fund	damentals of JAVA Pro	ogramming		
	Li	st of Laboratory E	xperiments		
	G	roup A (All are Co	ompulsory)		
1.	Write some simple prog	grams in Java such as:			
	i) To find factorial of r	number.			
	ii) To display first 50 p	orime numbers.			
	iii) To find sum and ave	erage of N numbers			
2.	Write a program in Ja	va to implement a Calc	lator with simple arithmetic operations such as		
	add, subtract, multiply, divide, factorial etc. using switch case and other simple java statements.				
	The objective of this assignment is to learn Constants, Variables, and Data Types, Operators and				
	Expressions, Decision making statements in Java.				
3.	Write a program in Jav	a with class Rectangle wi	th the data fields width, length, area and colour.		
	The length, width and	area are of double type	and colour is of string type. The methods are		
	get_length(), get_widt	h(), get_colour() and fin	nd_area(). Create two objects of Rectangle and		
	compare their area and colour. If the area and colour both are the same for the objects ther				
			ay "Non-matching Rectangle"		
4.	Write a program in JA		ethod and constructor overloading		
		Group B (Any	Four)		
5	Write Programs in Ja	va to sort i) List of int	egers ii) List of names. The objective of this		
	assignment is to learn A	Arrays and Strings in Java	L		
6.	Write a Program in Jav	a to add two matrices. Th	e objective of this assignment is to learn Arrays		
	in Java				
7.	1 0		ver class. Inherit the classes Cricket_player		
	Football_player and Hockey_player from player class. The objective of this assignment is to				
	learn the concepts of in				
8.		_	fined package and uses members of the classes		
	contained in the packag				
9.	Write a Java program v	which implements interfa	ce		

10	Write a program to create multiple threads and demonstrate how two threads communicate with
	each other.
	Group C (Any Three)
11.	Write a java program which use try and catch for exception handling.
12.	Write a Java program to draw oval, rectangle, line, text using graphics class
13.	Write a java program in which data is read from one file and should be written in another file line by line.
14.	A Mini project in Java: A group of 4 students can develop a small application in Java
	LAB Links: k of the Virtual Lab: <u>https://java-iitd.vlabs.ac.in/</u>

Note: Additional 2 experiments to be performed using the virtual labs.

Teaching Scheme:	Credit	Examination Scheme:	
Practical: 02 hrs. / week	01	Term work: 25 Marks	
Prerequisite Courses, if any:			
1. Basics of Electronics Compo	onents		
2. Working of Operational amp	olifier		
3. Basics of Electronics measur	ement instruments and	d Tools	
Companion Course, if any:			
Course Objectives:			
• To build and upgrade practic	al knowledge of an ind	lividual	
	e		
 To make students Employab To promote youth work to go 	-		
• To promote youth work to as			
• To grow and build confidence	-	-	
• To cultivate Entrepreneur m			
	lls such as moral/ethic	s/team work/communication skill/lifelong learning	
etc.			
Course Outcome: After Successfull	y completing the cour	se,	
CO1: Student should recognize the r	need to engage in indep	pendent and life-long learning in required skill sets	
CO2: Student needs to experience th	e impact of industries	on society by visiting different industries and	
understand the importance of i	ndustrial products for	analog and digital circuits and systems.	
CO3: Student has to make use of the mo	dern electronic and IT	Engineering Tools and Technologies for	
solving electronic engineering	problems.		
CO4: Student would be able to com	nunicate effectively at	different technical and administrative levels.	
CO5: Student will exhibit leadership skills both as an individual and as a member in a team in multidisciplinary			
environment.

	Group A (An	y Three)	
Testing /Measurement/	/Calibration/Troub	leshooting/Maintenance/Installation	

A. Apply skill sets mentioned in #Group A Skills 1 and may be covered as per availability of lab or equipment's.

	B. Apply Skill sets mentioned in <i>#Group A Skills I</i> may be covered by visiting any Automobile			
	service centers/Battery maintenance service centers or related industry.			
	Note: Batteries of e-Vehicle & Technology Involved (Lithium Batteries etc.)			
2.	Case study on Automotive Electronics. (Sensors, Clusters, Controls, Semiconductor's			
	devices etc.) A. Apply Skill set mentioned in # <i>Group A Skills 1 and Group A Skills 2</i> which is related to			
	automotive electronics may be covered as per availability of lab or equipment's.			
	OR			
	B. Apply Skill sets mentioned in <i>#Group A Skills 1</i> may be coveredby visiting any Automobile service centers or related industry.			
3.	Case study on Biomedical Instrumentation			
	A. Apply Skill set mentioned in #Group A Skills 3 which is related to automotive electronics may			
	be covered as per availability of lab or equipment's.			
	OR			
	B. Visit biomedical instrument maintenance service centers			
	OR			
	C. Visit Hospitals or related industry.			
	Note: Students are expected to know about sensors technology / Interface / maintenance /			
	calibration of electronic instrumentation of some of these equipment's.			
4.	Troubleshooting and maintenance of PCB Boards &Controllers			
5.	Troubleshooting and maintenance of Power supply			
Group B (Any Two)				
Software / Hardware Design				
1.	Design and Simulate dc-dc boost converter for battery-based applications			
	Design a conventional dc-dc boost converter to step-up the battery voltage of 5 V to 10 V. Draw			
	the circuit diagram and find required value of duty ratio. Implement the circuit in open-source			
	TINA software. Plot the graphs of output voltage and PWM signal with respect to time.			

2.	Design a web page(s)
	A. Using different text formatting tags
	B. With links to different pages and allow navigation between pages
	C. With Images, tables and frames
	D. Using style sheets to maintain uniform style for all web pages
	E. Using a form that uses all types of controls.
	F. Validate all the controls placed on the form using Java Script.

 3. SMPS Design A. Design and Simulate of SMPS of 24 V @ 1A. OR B. Design, simulate and Implement buck converter using ICs like LM3842 / LM 3524 and measure performance parameters like
OR B. Design, simulate and Implement buck converter using ICs like LM3842 / LM 3524 and measure performance parameters like 1. Load regulation 2. Line regulation 3. Ripple rejection 4. Output impedance and 5. Dropout voltage. 6. Note: Hardware based assignments: Note : EDA tool (NI Multisim/ORCAD/PSPICE / Altium Designer suite etc.) 4. Design and Simulate dc-dc boost converter for battery-based applications Design a conventional dc-dc boost converter to step-up the battery voltage of 5 V to 10 V. Dr the circuit diagram and find required value of duty ratio. Implement the circuit in open-sout TINA software. Plot the graphs of output voltage and PWM signal with respect to time. 5. Design and Simulate PID Controller based on OP-AMP Design an analog PID controller to track a reference voltage of 5 V in a circuit. Dra w the circuidiagram of the controller and implement the circuit in open-source TINA software. Change reference voltage to 10 V and show that the circuit can still track this changed reference voltage show the effect of 3 controller gains viz. proportional gain, integral gain and derivative gain the output response.
 B. Design, simulate and Implement buck converter using ICs like LM3842 / LM 3524 and measure performance parameters like Load regulation Line regulation Line regulation Ripple rejection Output impedance and Dropout voltage. Note: EDA tool (NI Multisim/ORCAD/PSPICE / Altium Designer suite etc.) 4. Design and Simulate dc-dc boost converter for battery-based applications Design and Simulate dc-dc boost converter for battery-based applications Design a conventional dc-dc boost converter to step-up the battery voltage of 5 V to 10 V. S	avitribai Phule Pur	ne University		
Third Year of E & Tc Engineering (2019 Course)				
304191 (A): Mandatory Audit Course - 5				
Teaching Scheme: Credit Examination Scheme:				

List of Courses to be opted (Any one) under Mandatory Audit Course 5

- Developing Soft skills and Personality
- Entrepreneurship and IP Strategy
- Urbanization and Environment
- Environmental & Resource Economics
- Environment and Development
- Globalization and Culture

GUIDELINES FOR CONDUCTION OF AUDIT COURSE

In addition to credits courses, it is mandatory that there should be audit course (non-credit course) from second year of Engineering. The student will be awarded grade as AP on successful completion of audit course. The student may opt for two of the audit courses (One in each semester). Such audit courses can help the student to get awareness of different issues which make impact on human lives and enhance their skill sets to improve their employability. List of audit courses offered in the semester is provided in the curriculum. Student can choose one of the audit course from list of courses mentioned. Evaluation of audit course will be done at institute level.

The student registered for audit course shall be awarded the grade AP and shall be included such grade in the Semester grade report for that course, provided student has the minimum attendance as prescribed by the Savitribai Phule Pune University and satisfactory insemester performance and secured a passing grade in that audit course. No grade points are associated with this 'AP' grade and performance in these courses is not accounted in the calculation of the performance indices SGPA and CGPA. Evaluation of audit course will be done at institute level itself.

Selecting an Audit Course:

Using NPTEL Platform:

NPTEL is an initiative by MHRD to enhance learning effectiveness in the field of technical education by developing curriculum based video courses and web based e-courses. The details of NPTEL courses are available on its official website www.nptel.ac.in

- Student can select any one of the courses mentioned above and has to register for the corresponding online course available on the NPTEL platform as an Audit course.
- Once the course is completed the student can appear for the examination as per the guidelines on the NPTEL portal.
- After clearing the examination successfully; student will be awarded with certificate.

Assessment of an Audit Course:

- The assessment of the course will be done at the institute level. The institute has to maintain the record of the various audit courses opted by the students. The audit course opted by the students could be interdisciplinary.
- During the course students will be submitting the online assignments. A copy of same students can submit as a part of term work for the corresponding Audit course.
- On the satisfactory submission of assignments, the institute can mark as "Present" and the student will be awarded the grade AP on the marksheet.

SEMESTER - VI

Prerequisite Courses, if an			
1. Basic knowledge of - Probat Companion Course, if any			
Course Objectives: To mak			
evalue objectivest format			
• Various propagation M	Iodel and Estimation techr	niques of wireless communication sys	stem.
• OFDM and MIMO tech	hnologies to explain mode	ern wireless systems.	
• Various aspects of mol	oile communication system	n.	
• Various aspects of wire	eless-system planning.		
• Different Generation o	f Mobile Networks.		
• Diversified issues that	can enhance Network Per	formance.	
Course Outcomes: On com	pletion of the course, le	arner will be able to -	
CO1: Understand fundamental	ls of wireless communicat	ons	
CO2: Discuss and study OFDM		10115.	
CO3: Elaborate fundamentals	*		
CO4: Describes aspects of wire			
CO5: Understand of modern a	• • •	orks architecture	
CO6: Summarize different issues			
	Course C		
Unit I		of Wireless Channel	(06 Hrs.)
		Reflection Scenario, Hata Model a	· · · · · · · · · · · · · · · · · · ·
		ity in wireless communications.	
Mapping of Course CO1: Understand fundamentals of wireless communications.			
Outcomes for Unit I			
Unit II C	Orthogonal Frequer	cy Division Multiplexing	(06 Hrs.)
Introduction, Motivation and M	Aulticarrier basics, OFDM	example, bit error rate for OFDM.	
Multiple-Input Multiple-C	Output Wireless Com	munications: Introduction to	MIMO Wireless
Communications, MIMO Syste	em Model and MIMO-OF	DM.	
Mapping of Course CO Outcomes for Unit II	2: Discuss and study C	OFDM and MIMO concepts.	

Unit III	Introduction to Mobile Communication	(08 Hrs.)	
Introduction to Cellular	Service Progression, Cell Geometry, Overview of Cellular mo	bile and Network	
architecture, Cellular radio	o system design Frequency assignments, frequency reuse channels	, Concept of cell	
splitting and Cell sectoring	g. Significance of Handover in cellular systems with Handoff algorit	thms and roaming.	
Mapping of Course	CO3: Elaborate fundamentals mobile communication.		
Outcomes for Unit			
III			
Unit IV	Wireless System Planning	(06 Hrs.)	
Link-Budget Analysis, Tel	e-traffic Theory, Tele-traffic System Model and Steady State Analy	× /	
Mapping of Course	CO4: Describes aspects of wireless system planning.		
Outcomes for Unit IV			
Unit V	Wireless and Mobile Technologies and Protocols	(06 Hrs.)	
	and their performance evaluation		
Introduction, Wireless and	l mobile technologies, LTE- advanced, 5G – Architecture, wireless l	ocal area network	
and Simulations of wireles	ss networks.		
Mapping of Course	CO5: Understand of modern and futuristic wireless netwo	orks	
Outcomes for Unit V	architecture		
Unit VI	Performance Analysis Issues	(08 Hrs.)	
Introduction to Network coding, basic hamming code and significance of Information Theory. Interference			
suppression and Power control. MAC layer scheduling and connection admission in mobile communication.			
Mapping of Course CO6: Summarize different issues in performance analysis			
Outcomes for Unit VI

PERT and CPM: Introduc Critical Path, PERT Model, M Resources Considerations in	tion, Development of Project Network, Time Estimation, Det Aleasures of variability, CPM Model, Network Cost System	ect Cost Estimate

Unit V	Project Risk & Financial Management	(08 Hrs.)
Unit v	I TUJEU NISK & Financial Management	(00 111 5.)

Project Risk Management: Introduction, Risk, Risk Management, Role of Risk Management in Overall Project Management, Steps in Risk Management, Risk Identification, Risk Analysis, Reducing Risks

Introduction to Project Management Tools such as: Trello, JIRA and Asana.

Financial Management in Projects: Project Finance structure, Process of Project Financial Management: Conducting Feasibility Studies, Planning the Project Finance, Arranging the Financial Package, Controlling the Financial Package, Controlling Financial Risk, Options Models.

Mapping	of	Course	CO5: Identify and assess the project risks and manage finar	ices in line with
Outcomes fo	or Uni	t V	Project Financial Management Process.	
Un	it VI	[Product Development & Entrepreneurship	(08 Hrs.)

Product Development: Introduction, Development Process and organizations, product planning, identifying customer needs, Product Significations, concept generation, selection, testing, Design for Manufacturing, Prototyping, Robust Design

Entrepreneurship: Concept, knowledge, and skills requirement; characteristic of successful entrepreneurs; entrepreneurship process; factors impacting emergence of entrepreneurship

Legal issues related to Product development and Entrepreneurship: Intellectual property rights- patents, trademarks, copyrights, trade secrets, licensing, franchising.

Mapping	of	Course	CO6: Develop new products assessing their commercial viability and
Outcomes fo	or Unit	t VI	develop skillsets for becoming successful entrepreneurs while being
			fully aware of the legal issues related to Product development and
			Entrepreneurship.

MOOC / NPTEL Courses:

1. NPTEL Course "Project Management for Managers"

Link of the Course: https://nptel.ac.in/courses/110/107/110107081/

2. NPTEL Course on "Intellectual Property Rights and Competition Law" Link of the Course: <u>https://nptel.ac.in/courses/110/105/110105139/</u>

List of Tutorials to be carried out

1.	Understanding Impact of Delays in Project Completions with a company's case study.
2.	Designing a Work Breakdown Structure (WBS) for any sample project.
3.	Case study on Conflict Resolution and understanding its challenges.
4.	Solve examples on Project scheduling using CPM and PERT Model.
5.	Assignment on Risk Identification and Risk Analysis with a company's example and/ or exploration of various project management tools.
6.	Prepare a Business plan for an sample Product/ Service to be launched.

	Course C	ontonts			
Unit I		undamentals	(08 Hrs.)		
Fundamental steps of Image Proc image types, Image histogram (processing.	essing, components of I	P, Image formation, image sar	npling and quantization,		
MappingofCourseCO1Outcomes for Unit I	: Apply knowledge of	mathematics for image under	rstanding and analysis.		
Unit II	Image Enhancem	ent in Spatial Domain	(07 Hrs.)		
Image enhancement in spatial d using arithmetic and logic operati transformation, contrast stretchin	ions, basic spatial filterin	ng, smoothing and sharpening			
Mapping of CourseCO2Outcomes for Unit II	: Implement spatial o	lomain image operations.			

Unit III	Image Segmentation	(06 Hrs.)
Point, line and edge de	tection, Thresholding, Regions Based segmentation, Edge linki	ng and boundary
detection, Hough transform	n.	
Mapping of Course	CO3: Design and realize various algorithms for image sea	gmentation.
Outcomes for Unit		
III		
Unit IV	Image Compression	(07 Hrs.)
Fundamentals of redundar	cies, Basic Compression Methods: Huffman coding, Concept of Dis	screte Cosine
Transform, JPEG Compression	ession standard, Y CB CR transformation, Introduction to MPEG st	andard ,Motion
estimation, compensation,	Introduction to video compression.	
Mapping of Course	CO4: Design and realize various algorithms for image co	mpression.
Outcomes for Unit IV		
Unit V	Image Restoration	(07 Hrs.)
A model of the image degr	adation/restoration process, noise models, restoration in the presence	e of noise-only
spatial filtering, Weiner fi	ltering, constrained least squares filtering, geometric transforms; Int	roduction to the
Fourier transform and the	frequency domain, estimating the degradation function.	
Mapping of Course	CO5: Apply restoration to remove noise in the image.	
Outcomes for Unit V		
Outcomes for Unit V		
Outcomes for Unit V Unit VI	Object Recognition	(07 Hrs.)
Unit VI		× /
Unit VI	Object Recognition	<u> </u>
Unit VI Object Recognition- patte	Object Recognition	× /

Course Contents			
Unit I	Introduction to Sensors & Transducers	(06 Hrs.)	
Automation, Broad Classi Block Diagram Measuren Accuracy, Precision, Repr Hysteresis, Backlash, Dyn	ept of Transducer, Comparison between Sensors and Transducers, R fication of Sensors and Transducers, Role of Transducer in meas nent system, Study of Static and Dynamic Characteristics of Meas oducibility, Linearity, repeatability, resolution, Sensitivity, Range, amic Characteristics: Fidelity, Time response and frequency response . Concept and Basic Principle of working of Resistive, Capaci	surement Systems, surement Systems: Span, Dead Zone, se, Classification	
Mapping of Course Outcomes for Unit I	CO1: Understand the concepts of Sensors / Transducers, class static and Dynamic Characteristics of Measurement Sy	-	
Unit II	Sensors for Temperature and Humidity Measurement	(06 Hrs.)	
Temperature Measurem	ent: Units of Temperature Measurement / Temp Measurement Sca	lles; Celsius Scale,	
Fahrenheit Scale, Kelvin	n Scale, Rankine Scale-Unit Conversions Broad Classification	n of Temperature	
Transducers, RTD (e.g.PT	-100), Thermocouple, Thermistors, Optical Fiber Sensors.		
(Basic Principle of Wor	king, Selection Criteria, Installation and Calibration, Signal	Conditioning (e.g	
Instrumentation Amplifier	(with AD-620).		
DC bridge: Wheatstone b	oridges, AC Bridge: Wein Bridge, Schering Bridge, Signal Condition	oning: 2 Wire, 3-	
Wire and 4-Wire Compens	sation.		
IR Temperature Sensor	: MLX90614 ESF Non-Contact Human Body Infrared Tempera	ture Measurement	
Module.			
Smart temperature and s	solid state sensors: LM35, AD590 (Only for real time application	n/implementation	
in project based learning			
Humidity: Hygrometer, Soil Humidity Sensor, Soil Hygrometer (DHT11, TI HDC1050)			
Mapping of Course Outcomes for Unit II	CO2: Choose the proper sensor comparing different star guidelines for measurements of Temperature and		
Unit III	Sensors for Force, Pressure, Stress and Flow	(06 Hrs.)	
(Basic Principle of Working, Selection Criteria, Installation and Calibration, Signal Conditioning)			
Pressure scales:	• Pressure scales: Newton, Bar, Pascal, PSI -Unit Conversions		
• Absolute, Gauge	Absolute, Gauge and Vacuum Pressure		
Classification of Press	ure sensors: Strain gauge (Load Cell using Strain gauge), Piezoe	electric	
	Transducer, Solid State Pressure Sensors (IC's like	GY-63	
	MS5611-01BA03 to be discussed)		
Differential Pressure Tr	ansducer flow measurement (only Mention of basic Principle o	f working,	
Bernoulli's theorem),	Bernoulli's theorem), Orifice, Venturi, Nozzle flow meter (only Descriptive), Pneumatic sensors		
(bellows, diaphragm), U	Jltrasonic and Hall effect Sensors for flow Measurement		

Solid State Flow Sensors: YF-S201, E8FC-25D, Fiber-Optic Sensors.

Mapping of Course Outcomes for Unit III	CO3: Choose the proper sensor comparing different stand guidelines for measurements of Force, Pressure, Str	
Unit IV	Sensors for Displacement, Vibration, Acceleration and Level	(06 Hrs.)
(Basic Principle of Work	king, Selection Criteria, Installation and Calibration, Signal Cond	ditioning)
Classification of Displ	acement Sensors: Potentiometer, Strain-gauged element, Ca	pacitive element,
Differential transformers,	Eddy current proximity sensors, Inductive and Capacitive Proximity	switch, Optical
encoders.		
Pneumatic sensors (Bello	ws, Diaphragm), Hall effect sensors, Accelerometer, Gyroscope a	and Magnetometer
(ADXL335/345), Electro-	-Optical Sensors, Position Encoders.	-
Mapping of Course	CO4: Choose the proper sensor comparing different stand	dards and
Outcomes for Unit IV	guidelines for measurements of Displacement, Vibr Acceleration and Level.	ration,

Third Year of E & TC Engineering (2019 Course)					
304195 (C): Advanced JAVA Programming (Elective - II)					
Teaching Scheme: Credit Examination Scheme:					
Theory: 03 hrs. / week	Theory: 03 hrs. / week03In-Sem (Theory): 30 Marks				
		End Sem (Theory): 70	Marks		
Prerequisite Courses, if any:					
1. Fundamentals of Java Program	ming				
Companion Course, if any: Ad	vanced JAVA Program	nming Lab			
Course Objectives: Make the learne	er to:				
• Design and develop GUI a	pplications using Abst	ract Windowing Toolkit (AWT),	Swing and Event		
Handling.					
• Design and develop Web ap	plications				
• Designing Enterprise based	applications by encapsu	lating an application's business lo	gic.		
• Designing applications using	g pre-built frameworks.				
Course Outcomes: On completion	of the course, learner w	ill be able to –			
CO1: Design and develop GUI appl	ications using Applets.				
CO2: Apply relevant AWT/ swing c	components to handle th	e given event.			
CO3: Design and develop GUI appl Handling.	ications using Abstract	Windowing Toolkit (AWT), Swin	g and Event		
CO4: Learn to access database throu	ıgh Java programs, usir	ng Java Database Connectivity (JD	BC)		
CO5: Invoke the remote methods in	an application using Re	emote Method Invocation (RMI)			
CO6: Develop program for client /s	erver communication u	sing Java Networking classes.			
	Course Contents				
Unit I	Α	pplet	(06 Hrs.)		
Applet Basics – Introduction, lim	itations of AWT, Ap	olet architecture – HTML APPL	ET tag – Passing		
parameter to Appletget, Document	Base() and getCodeBas	e(), Japplet: Icons and Labels Te	ext Fields Buttons,		
Combo Boxes , Checkboxes, Tabbee	l Panes, Scroll Panes, T	rees: Tables			
Mapping of Course CO1: D	Mapping of CO1: Design and develop GUI applications using Applets.				
Outcomes for Unit I					

Unit II	Event Handling using AWT/Swing components	(08 Hrs.)
Event Handling: Events,	Event sources, Event classes, Event Listeners, Delegation event	model, handling
mouse and keyboard ev	rents, Adapter classes, inner classes. The AWT class hierarch	y, user interface

components- labels, button, canvas, scrollbars, text components, checkbox, checkbox groups, choices, lists panels – scroll pane, dialogs, menu bar, graphics, layout manager – layout manager types – boarder, grid, flow, card and grib bag.

MappingofCourseCO2: Apply relevant AWT/ swing components to handle the given event.Outcomes for Unit II

Unit III

GUI Programming

(06 Hrs.)

Designing Graphical User Interfaces in Java, Components and Containers, Basics of Components, Using Containers, Layout Managers, AWT Components, Adding a Menu to Window, Extending GUI Features Using Swing Components, Java Utilities (java.util Package) The Collection Framework: Collections of Objects, Collection Types, Sets, Sequence, Map, Understanding Hashing, and Use of Array List & Vector.

Mapping of Course	CO3: Design and develop GUI applications using Abstract Windowing Toolkit
Outcomes for Unit III	(AWT), Swing and Event Handling.

		1
Unit IV	Database Programming using JDBC	(06 Hrs.)

The Concept of JDBC, JDBC Driver Types & Architecture, JDBC Packages, A Brief Overview of the JDBC process, Database Connection, Connecting to non-conventional Databases Java Data Based Client/server, Basic JDBC program Concept, Statement, Result Set, Prepared Statement, Callable Statement, Executing SQL commands, Executing queries

Mapping of Course	CO4: Learn to access database through Java programs, using Java Database	
Outcomes for Unit IV	Connectivity (JDBC).	

Unit V	Remote Method Invocation (RMI)	(06 Hrs.)

Remote Method Invocation: Architecture, RMI registry, the RMI Programming Model; Interfaces and Implementations; Writing distributed application with RMI, Naming services, Naming and Directory Services, Setting up Remote Method Invocation – RMI with Applets, Remote Object Activation; The Roles of Client and Server, Simple Client/Server Application using RMI.

Mapping of CourseCO5: Invoke the remote methods in an application using Remote MethodOutcomes for Unit VInvocation (RMI)

Unit VI	Networking	(08 Hrs.)
The java.net package, Con	nnection oriented transmission – Stream Socket Class, creating a	Socket to a remote
host on a port (creating TC	CP client and server), Simple Socket Program Example.	
InetAddress, Factory Me	thods, Instance Methods, Inet4Address and Inet6Address, TCP/	IP Client Sockets.
URL, URLConnection, H	IttpURLConnection, The URI Class, Cookies, TCP/IP Server Sci	ockets, Datagrams,
DatagramSocket, Datagram	mPacket, A Datagram Example.	

Connecting to a Server, Implementing Servers, Sending EMail, Servlet overview – the Java web server – The		
Life Cycle of a Servlet, your first servlet.		
Mapping of Course	CO6: Develop program for client /server communication using Java	
Outcomes for Unit VI	Networking classes.	

Text Books:

- 1. Herbert Schildt, "Java: The complete reference", Tata McGraw Hill, 7th Edition
- 2. Jim Keogh, "Complete Reference J2EE", Enterpr
- 3. E. Balaguruswamy, "Programming with JAVA: A Primer" McGraw Hill Education, India, 5th Edition.

Savitribai Phule Pune University					
Third Y	Third Year of E & TC Engineering (2019 Course)				
304195 (D): Embedded Processors (Elective - II)					
Teaching Scheme:	Credit	Examination Scheme:			
Theory: 03 hrs. / week	03	In-Sem (Theory): 30 Marks			
		End Sem (Theory): 70 Marks			
Prerequisite Courses, if any: 1. Digital Systems					
2. Microcontrollers					
Companion Course, if any: Emb	bedded Processors Lab				
Course Objectives:					
• To make the students aware	of the need of Embedde	ed C and programming in Embedded C.			
		pplications of ARM Microprocessors in Embedded			
systems.					
•	e and features of ARM 7	and ARM CORTEX M4 microcontroller.			
		f various I/O devices, sensors and communication			
devices.					
Course Outcomes: On completion of	of the course, learner wi	ll be able to -			
CO1: Understand basics of Embedd tools for programming microce	0 0	usage of Embedded C and study different software			
CO2: Get acquainted with various E	mbedded Processor arcl	nitectures related to industrial application.			
CO3: Know about the programming peripherals.	g of ARM 7 based micro	controller with on chip peripherals and external			
CO4: Understand the architectures of Microcontrollers.	of ARM Cortex M4 Mici	cocontrollers and its advantages over ARM 7			
CO5: Implement the real world programming of ARM 7 based microcontroller with on chip peripherals and external peripherals.					
CO6: Recognize the interfacing of r studies.	eal world sensors and sta	andard buses. Will also able to design different case			

Course Contents		
Unit I	Embedded Processor Fundamentals	(06 Hrs.)

Programming in Embedded C: Using C for Embedded C, data types, storage class, operators, Branching: if, else-if, Looping: for, while, do-while.

Embedded System Development Environment: IDE (Introduction) types of file generated on crosscompilation, assembler, disassembler, Simulators and Debuggers.

Embedded System definition, Embedded Processor definition and classification, The RISC and CISC, von Neumann and Harvard Architecture, ARM processors and its versions, features of ARM Processor Families: ARM7, ARM9 & ARM11, ARM Design Philosophy.

	CO1: To understand basics of Embedded C Programming and usage of	
Outcomes for Unit I	Embedded C and study different software tools for programming	
	microcontrollers.	
Unit II	ARM7 Based Microcontroller	(08 Hrs.)

ARM core data flow model, Programmers model, Registers, CPSR and SPSR, Processor modes, ARM Nomenclature.

LPC2148: Features, Block Diagram and Description, System Control Block, Memory Map, System Control Block (PLL and VPB divider), Pin Connect Block, GPIO, Timer Block for Delay Generation, LPC 2148 Interfacing with LED, Switches, Relay, Interfacing LCD and keypad.

Interfacting with LDD, 5 whenes, ready, interfacting DoD and Reyplan.			
Mapping of Course	CO2: To get acquainted with various Embedded Processor architectures		
Outcomes for Unit II	related to industrial application.		
Unit III	Real World Interfacing with ARM7 Based	(06 Hrs)	
	Microcontroller	[×]	
UART Programming for t	ransmission and reception of characters, Interfacing the peripherals	to LPC2148: GSM	
and GPS using UART, on-	and GPS using UART, on-chip ADC using interrupt (VIC), EEPROM using I2C, on-chip DAC for waveform		
generation, Interfacing with ARM 7 with DHT 11 sensor and servomotor.			
Mapping of Course	CO3: To Know about the programming of ARM 7 based microcontroller		
Outcomes for Unit	with on chip peripherals and external peripherals.		
III			
Unit IV	Introduction to ARM CORTEX M4 Based	(08 Hrs)	
	Microcontroller		
Introduction to ARM CO	Introduction to ARM CORTEX series: CORTEX A, R, M processors, Firmware development using CMSIS		
Standard. Introduction to	Standard. Introduction to ARM CORTEX M4 microprocessor core, programmer model, Processor Modes,		
Memory Map, Introduction Arm Cortex-M cores, STM32F4xx Architecture, ARM STM Bus Architecture,			
STM32F4xx Clock and SYSCLK, Peripheral Clock, PLL clock, Interrupts and Exceptions in STM32F4xx.			
Mapping of Course	apping of Course CO4: To understand the architectures of ARM Cortex M4		
Outcomes for Unit IV	it IV Microcontrollers and its advantages over ARM 7 Microcontrollers.		

Unit V	Real World Interfacing with Cortex M4 Based	(06 Hrs.)		
	Microcontroller			
GPIO Programming, Inter	GPIO Programming, Interfacing seven segment LED, LDR and MQ3 sensor with STM32F4xx,			
STM32F4xx: Counters and	STM32F4xx: Counters and Timers: Timer and Delay Generation, UART Programming, on chip ADC and On-			
chip DAC for waveform generation.				
Mapping of Course CO5: Implement the real world programming of ARM		oased		
Outcomes for Unit V	Outcomes for Unit V microcontroller with on chip peripherals and external peripherals			
Unit VI	Case Studies with Cortex M Based	(06 Hrs.)		
	Microcontroller			
STM32F4xx Interfacing with accelerometer MPU 6050, Ultrasonic Sensor HC-SR04, PWM: Controlling speed				
and direction of DC Motor CAN Bus: Features, CAN Frame, sequence of transmitting and receiving data on				
CAN Bus.				
Mapping of Course				
Outcomes for Unit VI				
	using different case studies.

304	4195 (E): Network	Security (Elective-II)			
Teaching Scheme:	Credit	Examination	Scheme:		
Theory: 03 hrs. / week03In-Sem (Theory): 30 Marks					
End Sem (Theory): 70 Marks					
Prerequisite Courses, if any	y:				
Companion Course, if any:					
Course Objectives: To introdu network security.	ice various network mode	els, security threats and attacks an	d fundamentals of		
• To imbibe good found	ation of network security	in students for implementation of	new network security		
algorithms.					
• To understand differen	t network models and the	protocols used in each layer.			
• To acquire detailed app	proach of encryption decr	yption for the data to transmit.			
• To understand the role	of network security as a t	ool for protection of different net	work entities.		
• To be able to accuratel	y apply security algorithm	ns to real world security issues.			
• To ensure windows and	l web browser security th	rough implementation of various	encryption standards.		
Course Outcomes: On complet	ion of the course, learner	will be able to -			
CO1: Analyze attacks on comp	outers and computer secur	ity.			
CO2: Demonstrate knowledge	of cryptography techniqu	les.			
CO3: Illustrate various Symme	etric and Asymmetric key	s for Ciphers			
CO4: Evaluate different Messa	ge Authentication Algorit	thms and Hash Functions			
CO5: Get acquainted with var	ious aspects of E-Mail Se	curity			
CO6: Assimilate various aspec					
	Course (
Unit I		nputers and Computer Security	(06 Hrs.)		
		s, Principles of security, Types of	Security attacks,		
Security services, Security Mechanisms, A model for Network Security					
MappingofCourseCO1: Analyze attacks on computers and computer security.Outcomes for Unit I					
Unit IICryptography-Concepts and Techniques(06 Hrs.)					
Introduction, plain text and cipher text, substitution techniques, transposition techniques, encryption and					
decryption, symmetric and asyn	nmetric key cryptograph	y, stenography, key range and key	y size, possible types of		
attacks.					

Mapping of Course Outcomes for Unit II	CO2: Demonstrate knowledge of cryptography technique	S.
Unit III	Symmetric and Asymmetric key for Ciphers	(08 Hrs.)
Block Cipher principles &	Algorithms (DES, AES, Blowfish), Differential and Linear Cry	pt analysis, Block
cipher modes of operati	on, Stream ciphers, RC4, Location and placement of encryptic	on function, Key
distribution, Asymmetric	key Ciphers, Principles of public key crypto systems, Algorith	ms (RSA, Diffie-
Hellman, ECC), Key Distr	ribution.	
Mapping of Course Outcomes for Unit III	CO3: Illustrate various Symmetric and Asymmetric keys	for Ciphers.
Unit IV	Message Authentication Algorithms and Hash Functions	(07 Hrs.)
Authentication requirement	nts, Functions, Message authentication codes, Hash Functions, Secur	e hash algorithm,
HMAC, CMAC, Digital	signatures, knapsack algorithm, Authentication Applications s	such as Kerberos
X.509 Authentication Serv	vice, Public – Key Infrastructure, Biometric Authentication.	
Mapping of Course Outcomes for Unit IV	CO4: Evaluate different Message Authentication Algorith Functions.	ms and Hash
Unit V	E-Mail Security	(06 Hrs.)
Pretty Good Privacy, S	/MIME, IP security overview, IP Security architecture, Authe	ntication Header
Encanculating Security n	ayload, Combining security associations, Key management	
Encapsulating, Security p

Savitribai Phule Pune University Third Year of <mark>E & Tc Engineering</mark> (2019 Course) 304199: Internship							
					Teaching Scheme:	Teaching Scheme: Credit	Examination Scheme:
					**	04	Term Work: 100 Marks
Course Objective:							
*		ronment, which cannot be simulated in the					
classroom and hence creatin		·					
	ies to learn, understand	and sharpen the real time technical / managerial					
skills required at the job.							
-		s relevant to the subject area of training.					
• Experience gained from the	•						
		e and its applicability on the job.					
• Learn to apply the Technical	-						
• Gain experience in writing	Technical reports/project	cts.					
• Expose students to the engin	-						
	terials, processes, produ	acts and their applications along with relevant					
aspects of quality control.							
Promote academic, profession	_	velopment.					
• Expose the students to futur							
		considerations that influence the working					
environment of industrial or	0						
Understand the psychology	of the workers and their	habits, attitudes and approach to problem solving.					
Course Outcomes: On completion	of the internship, learn	er will be able to –					
CO1: To develop professional comp	betence through internsh	iip.					
CO2: To apply academic knowledge	e in a personal and profe	essional environment.					
CO3: To build the professional netw	ork and expose student	s to future employees.					
CO4: Apply professional and socie	tal ethics in their day to	day life.					
CO5: To become a responsible prof	fessional having social,	economic and administrative considerations.					
CO6: To make own career goals and	l personal aspirations.						

Internships are educational and career development opportunities, providing practical experience in a field or discipline. Internships are far more important as the employers are looking for employees who are properly skilled and having awareness about industry environment,

practices and culture. Internship is structured, short-term, supervised training often focused around particular tasks or projects with defined time scales.

Core objective is to expose technical students to the industrial environment, which cannot be simulated/experienced in the classroom and hence creating competent professionals in the industry and to understand the social, economic and administrative considerations that influence the working environment of industrial organizations.

Engineering internships are intended to provide students with an opportunity to apply theoretical knowledge from academics to the realities of the field work/training. The following guidelines are proposed to give academic credit for the internship undergone as a part of the Third Year Engineering curriculum.

A. Duration:

Internship to be completed after semester 5 and before commencement of semester 6 of at least 4 to 6 weeks; and it is to be assessed and evaluated in semester 6.

B. Framework of Internship:

- ✓ Students are required to be involved in Inter/ Intra Institutional Activities viz; Training with higher Institutions.
- ✓ Soft skill training organized by Training and Placement Cell of the respective institutions; contribution at incubation/ innovation /entrepreneurship cell of the institute; participation in conferences/ workshops/ competitions etc.
- ✓ Learning at Departmental Lab/ Tinkering Lab/ Institutional workshop.
- ✓ During the vacation after 5th semester, students are ready for industrial experience. Therefore, they may choose to undergo Internship / Innovation / Entrepreneurship related activities.
- Students may choose either to work on innovation or entrepreneurial activities resulting in start-up or undergo internship with industry/ NGO's/ Government organizations/ Micro/ Small/ Medium enterprises to make themselves ready for the industry.
- ✓ Every student is required to prepare a file containing documentary proofs of the activities done by him. The evaluation of these activities will be done by Programmed Head / Cell Incharge / Project Head / TPO / faculty mentor or Industry Supervisor.

C. Internship Guidelines:

a) Guidelines to the Institute:

Department will arrange internship for students in industries / organization after fifth semester or as per AICTE/ affiliating University guidelines & managing internships. The general procedure for arranging internship is given below:

Step 1: Request Letter/ Email should go to industry to allot various slots of 4-6 weeks as internship periods for the students. Students request letter /profile / interest areas may be submitted to industries for their willingness for providing the training.

Step 2: Industry will confirm the training slots and the number of seats allocated for internships via Confirmation Letter/ Email. In case the students arrange the training themselves the confirmation letter will be submitted by the students.

Step 3: Students on joining Training at the concerned Industry / Organization, submit the Joining Report/Letters / Email.

Step 4: Students undergo industrial training at the concerned Industry / Organization. In-between Faculty Member(s) evaluate(s) the performance of students once/twice by visiting the Industry/Organization and Evaluation Report of the students is submitted in department.

Step 5: Students will submit training report after completion of internship.

Step 6: Training Certificate to be obtained from industry.

Step 7: List of students who have completed their internship successfully will be issued by Training and Placement Cell.

b) Guidelines to the students:

Any absenteeism by students during their internship should be informed immediately to the mentor/reporting manager and the internal guide. No special considerations will be accepted. Students cannot take leave for college work or fest activities. The leave permission for any college related activities will be solely approved by the HOD. The monthly attendance format should be duly submitted to the internal guide by the intern.

c) Internal reporting Guidelines:

Every intern should send weekly report to their internal guide without fail. It is mandatory for the intern to send weekly reports to their respective guide on regular basis. Interns should have at least fortnightly verbal communication with the internal guide without fail. In cases where in the company wants to secure their confidential information in the project / internship report, the internal guide should duly co-ordinate with the respective mentor/reporting manager on the method of reporting to assure that no information will be leaked outside and is purely for academic purposes.

d) Internship Diary / Internship Workbook:

Students must maintain Internship Diary/ Internship Workbook. The main purpose of maintaining diary/workbook is to cultivate the habit of documenting. The students should record in the daily training diary account of the observations, impressions, information gathered and

suggestions given, if any. The training diary/workbook should be signed after every day by the supervisor/ in charge of the section where the student has been working.

Internship Diary/workbook and Internship Report should be submitted by the students along with attendance record and an evaluation sheet duly signed and stamped by the industry to the Institute immediately after the completion of the training. Internship Diary / workbook may be evaluated on the basis of the following criteria:

- Proper and timely documented entries.
- Adequacy & quality of information recorded
- Data recorded.
- Thought process and recording techniques used.
- Organization of the information.

e) Internship Work Evaluation:

Every student is required to prepare a maintain documentary proofs of the activities done by him / her as internship diary or as workbook. The evaluation of these activities will be done by Programme Head/ Cell In-charge / Project Head / faculty mentor or Industry Supervisor based on-overall compilation of internship activities, sub-activities, the level of achievement expected, evidence needed to assign the points and the duration for certain activities.

Assessment and Evaluation is to be done in consultation with internship supervisor (Internal and External - a supervisor from place of internship).

f) Evaluation through Seminar presentation / Viva-voce at the institute:

The student will give a seminar based on his training report, before an expert committee constituted by the concerned department as per norms of the institute. The evaluation will be based on the following criteria:

- ✓ Depth of knowledge and skills Communication & Presentation Skills.
- ✓ Team Work
- ✓ Creativity
- ✓ Planning & Organizational skills
- ✓ Adaptability and Analytical Skills
- ✓ Attitude & behavior at work.
- ✓ Societal Understanding
- ✓ Ethics
- ✓ Regularity and punctuality
- ✓ Attendance record
- ✓ Log book
- ✓ Student's Feedback from External Internship Supervisor

g) Internship Report:

The report shall be presented covering following recommended fields but limited to:

- ➢ Title/Cover Page
- Internship completion certificate.
- Internship Place Details- Company background-organization and activities/Scope and object of the study / personal observation.
- ➢ Index/Table of Contents
- ➢ Introduction
- Title/Problem statement/objectives
- Motivation/Scope and rationale of the study
- Methodological details
- Results / Analysis /inferences and conclusion
- Suggestions / Recommendations for improvement to industry, if any
- Attendance Record
- List of reference (Library books, magazines and other sources)

h) Feedback from internship supervisor (External and Internal):

Post internship, faculty coordinator should collect feedback about student with following recommended parameters:

- ✓ Technical knowledge
- ✓ Discipline
- ✓ Punctuality
- ✓ Commitment
- \checkmark Willingness to do the work
- ✓ Communication skill
- ✓ Individual work
- ✓ Team work
- ✓ Leadership

Sa	vitribai Phule I	Pune University		
Third Year of <mark>E & Tc Engineering</mark> (2019 Course) 304200: Mini Project				
Practical: 04 hrs. / week	02	Term Work: 25 Marks		
		Oral: 50 Marks		
	s of the project and d			
Imbibing good soldering andFollowing correct grounding				
• To develop student's abilit delivery of Seminar based on		nnical information clearly and test the same by		
• To understand the importance of document design by compiling Technical Report on the Mini Project work carried out.				

CO1: Understand, plan and execute a Mini Project with team.

CO2: Implement electronic hardware by learning PCB artwork design, soldering techniques, testing and troubleshooting etc.

CO3: Prepare a technical report based on the Mini project.

CO 4: Deliver technical seminar based on the Mini Project work carried out.

A) Execution of Mini Project

- Project group shall consist of **not more than 3** students per group.
- Mini Project Work should be carried out in the Design / Projects Laboratory.

• Project designs ideas can be necessarily adapted from recent issues of electronic design magazines Application notes from well known device manufacturers may also be referred.

- Use of Hardware devices/components is mandatory.
- Layout versus schematic verification is mandatory.
- Bare board test report shall be generated.
- Assembly of components and enclosure design is mandatory.

B: Selection: Domains for projects may be from the following, but not limited to:

- Instrumentation and Control Systems
- Electronic Communication Systems
- Biomedical Electronics
- Power Electronics
- Audio, Video Systems
- Embedded Systems
- Mechatronic Systems
- Microcontroller based projects should preferably use Microchip PIC controllers / ATmega controller / AVR microcontrollers / Ardino / Rasberry Pi.

C. Monitoring: (for students and teachers both): Suggested Plan for various activities to be monitored by the teacher.

Week 1 & 2: Formation of groups, Finalization of Mini project & Distribution of work.

Week 3 & 4: PCB artwork design using an appropriate EDA tool, Simulation.

Week 5 to 8: PCB manufacturing through vendor/at lab, Hardware assembly, programming

(if required) Testing, Enclosure Design, Fabrication etc

Week 9 & 10: Testing of final product, Preparation, Checking & Correcting of the Draft Copy of Report Week 11 & 12: Demonstration and Group presentations.

Log book for all these activities shall be maintained and shall be produced at the time of examination.

D. Report writing: A project report with following contents shall be prepared:

- ➤ Title
- Specifications
- Block Diagram
- Circuit Diagram
- Selection of components, calculations
- Simulation Results
- > PCB Art work
- Testing Procedures
- Enclosure Design
- Test Results & Conclusion
- ➢ References

Savitribai Phule Pune University				
Third Year of E & Tc Engineering (2019 Course)				
304191 (B): Mandatory Audit Course - 6				
Teaching Scheme:	Credit	Examination Scheme:		

List of Courses to be opted (Any one) under Mandatory Audit Course 6

- Patent Law for Engineers and Scientists
- English language for competitive exams
- Energy Resources, Economics and Environment
- Principles of Human Resource Management
- Six Sigma
- Non-Conventional Energy Resources

GUIDELINES FOR CONDUCTION OF AUDIT COURSE

In addition to credits courses, it is mandatory that there should be audit course (non-credit course) from second year of Engineering. The student will be awarded grade as AP on successful completion of audit course. The student may opt for two of the audit courses (One in each semester). Such audit courses can help the student to get awareness of different issues which make impact on human lives and enhance their skill sets to improve their employability. List of audit courses offered in the semester is provided in the curriculum. Student can choose one of the audit course from list of courses mentioned. Evaluation of audit course will be done at institute level.

The student registered for audit course shall be awarded the grade AP and shall be included such grade in the Semester grade report for that course, provided student has the minimum attendance as prescribed by the Savitribai Phule Pune University and satisfactory insemester performance and secured a passing grade in that audit course. No grade points are associated with this 'AP' grade and performance in these courses is not accounted in the calculation of the performance indices SGPA and CGPA. Evaluation of audit course will be done at institute level itself.

Selecting an Audit Course:

Using NPTEL Platform:

NPTEL is an initiative by MHRD to enhance learning effectiveness in the field of technical education by developing curriculum based video courses and web based e-courses. The details of NPTEL courses are available on its official website <u>www.nptel.ac.in</u>

- Student can select any one of the courses mentioned above and has to register for the corresponding online course available on the NPTEL platform as an Audit course.
- Once the course is completed the student can appear for the examination as per the guidelines on the NPTEL portal.
- After clearing the examination successfully; student will be awarded with certificate.

Assessment of an Audit Course:

- The assessment of the course will be done at the institute level. The institute has to maintain the record of the various audit courses opted by the students. The audit course opted by the students could be interdisciplinary.
- During the course students will be submitting the online assignments. A copy of same students can submit as a part of term work for the corresponding Audit course.
- On the satisfactory submission of assignments, the institute can mark as "Present" and the student will be awarded the grade AP on the marksheet.
