(57) **ABSTRACT**
 Our Invention "Automatic Fuel Energy Generated Car" is a concept used to generate adequate electrical power to charge a plurality of storage batteries driving a perpetual, fuel-free electric vehicle or alike. The batteries supply adequate power to at least one electric motor to propel the vehicle and supply electricity to all other vehicle instruments such as lights, wipers, defogger, etc. The invented technology also includes the two alternatives, and green energy sources are used to continuously charge the batteries: solar energy generated from solar panels covering every and all possible area of the vehicle's exterior surface and wind energy generated by one or more electric generators driven by one or more wind turbines mounted within the vehicle and placed under its exterior surface. The invented technology is a front, top and side wind streams surrounding the vehicle, are channeled through air passages and each air passage is designed as a funnel-like air duct where the end of the air duct with the smaller cross-sectional area is directed into the entry of the wind turbine system to accelerate the stream-lined winds. The energy of the aggregated and accelerated winds harnessed by one or more wind turbine systems placed in the wind streams' path. Each wind turbine system has an electric generator to convert the rotational energy of turbine's shaft into electric energy. The invented technology takes the output of each wind turbine generator to a controller unit where electric voltage is regulated and converted, if necessary, to charge the plurality of storage batteries. The output of the solar panels are also applied to the controller unit to be regulated and converted if necessary to charge storage batteries' plurality. The controller unit continuously charges the batteries of the electric vehicle, whether the vehicle is stopped or running. The controller unit is also
